

PART 19 - Unbundled Network Elements and Number
Portability

SECTION 13 - Access to AIN Databases

3rd Revised Sheet No. 1

1. ACCESS TO AIN DATABASES

(N)

A. DESCRIPTION

Access to Advanced Intelligence Network (AIN) Databases provides telecommunications carriers access to the Company's various AIN Call Related databases. AIN is a Network Architecture that uses distributed intelligence in centralized databases to control call processing and manage network information, rather than performing those functions at every switch. AIN information is obtained by making queries which are routed using the Company's Signaling System 7 (SS7) network to the Company's Service Control Points (SCP).

B. TERMS AND CONDITIONS

1. Access to AIN is only available to telecommunications carriers for use in the provisioning of a telecommunications service as specified and to the extent required by the Telecommunications Act of 1996 ("the Act") and the rules and regulations of the Federal Communications Commission (FCC) and the Illinois Commerce Commission.
2. This Section applies to Access to AIN provided by Ameritech Illinois, hereby referred to as the "Company".
3. General Regulations as found in Part 2 of this tariff and Section 1 of this Part apply to this Section unless otherwise specified in this Section. The term "customer", which appears in Part 2, General Regulations, is the equivalent of the term "telecommunications carrier" as used in this Section.

Portability

SECTION 13 - Access to AIN Databases

3rd Revised Sheet No. 2

1. ACCESS TO AIN DATABASES (cont'd)

(N)

B. TERMS AND CONDITIONS (cont'd)

4. Ameritech Illinois AIN network architecture, methods of access, manner of provisioning, and set of AIN features and functionality are designed for its specific service offerings. Thus, any request for AIN access by a telecommunications carrier must be reviewed for technical feasibility, with all rates, terms, and conditions related to such request to be determined on an individual case basis.

Upon request by a telecommunications carrier, and where technically feasible, the Company will provide telecommunications carrier with access to the Company's AIN platform, AIN Service Creation Environment (SCE) and AIN Service Management System (SMS) based upon telecommunications carrier's specific rates, terms, and conditions. As a result, Access to AIN will be offered on a Bona Fide Request (BFR) basis as defined in Part 19, Section 1.

C. TECHNICAL REFERENCES

The Company's AIN database will receive and respond to queries for customer name information as defined in the following technical references.

<u>Subject</u>	<u>Technical References</u>
SSP AIN Generic Requirements	GR-1298
SSP/SCP Interface Documents	GR-1299

The Technical References can be obtained from:
